

Readability rises with recurrent depth across Ouro checkpoints and qualitatively in Huginn

Readout only. Absolute levels are not comparable across architectures; the shared trend and differing transfer geometry are the findings.

A Ouro family, earliest layer

same subset, splits, taps, and grid as Figure 2

B Huginn-0125

out-of-family · core-boundary readout

C First-pass rotation

circles: first-pass source · squares: second-pass source · evaluated at step/pass 4 · whiskers: 95% task-clustered CIs
